High Technology Cables  
& Connectivity Solutions

# The company

AP Solutions Ltd (APS®) is the Finnish company that made its name internationally as the specialist in the design and manufacturing of high technology cables and cabling solutions for communications.

With over 20 years of experience, a lean organization structure, and a solid presence in international markets, APS® has what is needed to answer the call as a dynamic company capable of offering standard and custom solutions to meet the needs of demanding customers and a variety of applications.

Our R&D process, just like our design, manufacturing and testing abilities, is organized by focusing on cables that can transfer voice and data to the most diverse of environments, including Telecommunication & Data, Transportation, Ship Building, Oil & Gas, Electronics, Audio & Video, and Defense to name just a few.

We place a high value on customer service and make ourselves available whenever and wherever our customers need us. Each of our branches employ personnel with a background in physical installation, allowing us to go on-site with the customer to help them with the planning, maintenance and trouble-shooting phases.

Since 2014, AP MOG Solutions Pte Ltd, Singapore has served our customers throughout Asia and has focused on developing our business within the region. Continuing our efforts in international development, the younger AP Solutions Kenya Ltd, Kenya, was established in 2017 to expand our presence on the African continent.

# Telecommunications & Data networks

Born in 2005, APS® was established to serve as a specialty supplier of cables and systems to the telecommunications and data networks industries. Our primary focus is on the present and future trends of cabled communication, especially as it pertains to LAN, Access, FTTx, and Data Center. However, we are also able to supply products and solutions to aging telephone networks on twisted pairs.

Our structured cabling solutions for indoor/outdoor use, be it copper, fiber or hybrid, are available with an Extended Warranty of 25 years through our network of approved and certified installers and distributors.

# Marine, Oil & Gas

APS® supplies the Ship Building and Oil & Gas industries with a complete range of communication and special cables that are robust, long lasting, and designed for optimal performance. All standard cables are available with a Type Approval Certificate straight from a massive stock which includes LAN cables, BUS cables, Coaxial and Fiber Optic cables, as well as composite cables for CCTV systems and other applications.

Our specialty cables are the result of case-by-case evaluations. Our experienced technical personnel carefully design these cable to the customer's desires and needs or design the custom manufacturing in accordance to the given specifications.

# Wires & Cables

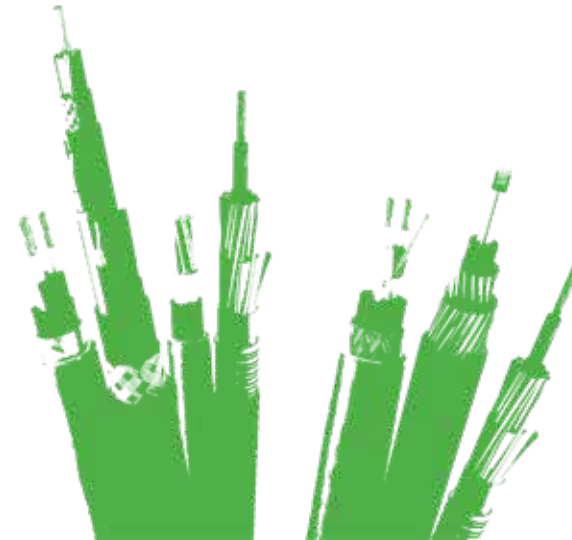

We offer an extensive range of high-quality standard and specialty cables to service the most diverse range of applications available. We design copper, fiber optic, and hybrid cables to carry signals and communication through the most varied of environments. From the coldest to hottest climates, from underground and underwater to high in the skies, in corrosive muds and over hot deserts; the more challenging the application and environment, the more engaged our team will be.

We aim to deliver to our customers exactly what they need, where they need it, and when they need it.
